 MIN. INLET PRESSURE 15 PSIG
 MAX. DIFF. PRESSURE 125 PSI
 MIN. DIFF. PRESSURE 15 PSI

MAINTENANCE

Unsatisfactory regulation is usually due to dirt, pipe compound, etc., blocking the internal strainer or gumming the internal mechanism. To clean strainer, first make sure pressure has been relieved from system. Unscrew bottom plug and remove strainer screen. Clean the lower part of the valve. This can be accomplished without removing the valve from the line or unbolting the cover. If cleaning the strainer does not correct operation, remove valve from line and disassemble parts. After cleaning parts the disc and seat should be lapped together using fine lapping compound. Avoid excessive lapping as this cuts ridges and makes tight seating impossible. Reassemble valve.
