- Ductile Iron body - HD Series
- Full port strainer & blowdown valve on pilot adapter for ultimate protection from dirt - HD only
- Hardened stainless steel trim for extended life
- Pre-mounted tubing & pilot adapter

TYPICAL APPLICATIONS

The Watson McDaniel **D-Series** and **HD-Series** pilot operated regulators were designed for **extremely accurate control** of **temperature** and **pressure** in steam service applications. The **D-Series** is made from **cast-iron** and the **HD-Series** is constructed from **Ductile-iron** for extended pressure and temperature ratings. These regulators have several different control pilots, which can be attached to the valve to control pressure, temperature, or a combination of both. The different control pilots can be added or removed from the standard valve body. This modular design adds to the versatility of this product. This product line offers a complete range of overlapping pressure ranges with clearly marked color-coded springs. The most common options include the **P-Pilot** for pressure reducing, and the **T-Pilot** for temperature control.

CONTROL PILOTS

Pressure

When controlling pressure there are several options you can use for a pilot. The **P-Pilot** and the **P5-Pilot** are both **spring adjusted** pressure pilots. The **P-Pilot** is used on typical general-purpose pressure reducing applications. The **P5-Pilot** is used when added accuracy is required. The **P5** is capable of maintaining a control pressure window of less than 1 psi. The **A-Pilot** is air controlled and generally used when adjustment of the regulator and pressure reducing station is done remotely.

Temperature

The **T-Pilot** is used to control temperature. The **T-Pilot** is filled with a temperature sensitive liquid, which expands when heated. The expansion of this liquid actuates a bellows that controls the temperature-regulating valve. The **T-Pilot** is equipped with an overheat bellows that protects the pilot in case of an over temperature condition. The **T-Pilot** controls temperature through a range from **60-260°F**.

On-Off

On-off control of the regulator is possible by using the **S-Solenoid Pilot** solenoid. The **S-Pilot** allows the regulator to be shut down or turned on **electrically**. Normally the regulator is equipped with either a **P-Pressure Pilot** or **T-Temperature Pilot** in addition to the **S-Pilot**.

Pressure-Temperature

The **PT-Pilot** combination is used when it is desirable to control both the **pressure** and **temperature** of a system with only one regulating valve. The unique features of this modular valve allow this to be accomplished quite easily. When the **PT-Pilot** combination is used the down stream pressure is limited to a maximum setting by the pressure pilot and the temperature pilot maintains the correct temperature.

Back-Pressure

When controlling the back pressure in a system the **BP-Pilot** is used in conjunction with the **D-Series** and **HD-Series** regulator. This controls the pressure on the up-stream side of the regulator.

COMBINATION PILOTS

One of the advantages of the **D-Series** and **HD-Series** regulating valve is that it can be used with many different variations of controlling pilots. Up to three pilots can be used simultaneously to control the operation of these valves. The most common of which is the **Temperature-Pressure** combination pilot. In addition to these pilots being used together the **S-pilot** can be used for turning the system on and off.

FEATURES

- No external power source is required. This simplifies the valve and minimizes installation and maintenance costs.
- Pressure and temperature pilots can be used in combination eliminating the need for a separate pressure and temperature regulator.
- The modular design allows any pilot to be added to the main regulating valve. This adds flexibility and reduces inventory.
- Available in Ductile iron for higher-pressure ranges and increased safety. Ductile Iron is a better choice than cast-iron for steam applications.
- The HD regulators come standard with full port strainers and blow down valve on the pilot mount to guard against dirt in the steam system which cause other regulators to fail.
- Hardened stainless steel trim (55Rc) for extended life even in the most demanding applications.
- The innovative design allows the pilot to be mounted on either side of the regulator and is easily field reversible.
- Comes fully assembled with tubing and pilot adapter. The control pilot requires only four bolts to complete the installation.

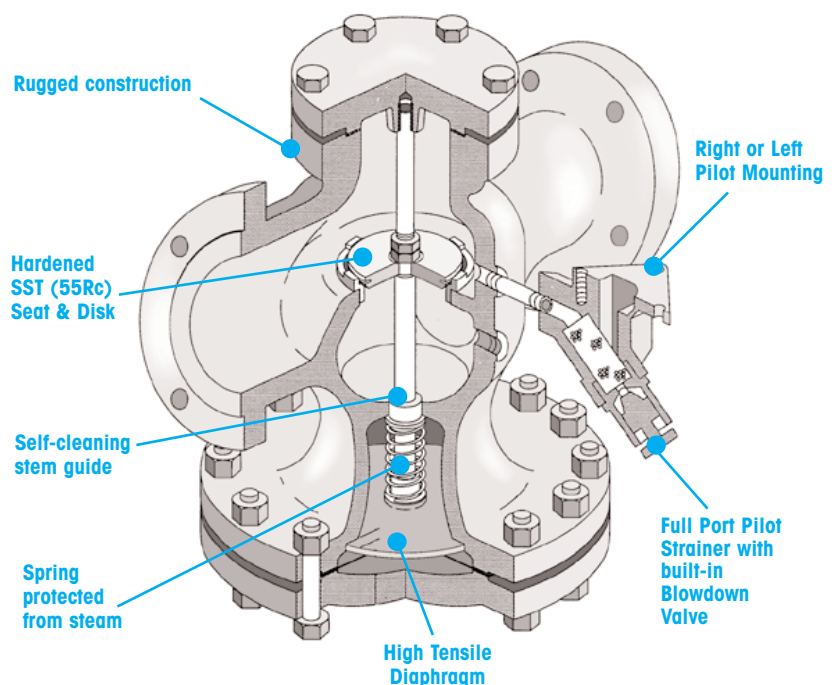

TYPICAL APPLICATIONS

The Watson McDaniel **D-Series** and **HD-Series** pilot operated regulators were designed for steam applications. Pilot operated pressure regulating valves are the best choice when downstream pressure must be accurately controlled regardless of variations in upstream pressure and varying steam load conditions. There are several types of control pilots that can be used with these regulators to control pressure, temperature, on/off control, or a combination of all three.

RECOMMENDED PRESSURE

Differential Pressure: 10 psig minimum

Minimum Inlet Pressure: 15 psig*

*Minimum Inlet Pressure for Temperature Regulator: 5 psig

HOW TO ORDER

REGULATOR BODY

Specify: • **D** or **HD** regulator body
 • Regulator size or capacity of steam required
 • End connections
 (threaded, 125/150/250/300# flanged).

PILOT REQUIRED TO OPERATE THIS VALVE

Note: See "How to Order" in specific Pilot Section

- **T** Temperature Pilot
- **P** Pressure Pilot
- **A** Air Pilot
- **S** Solenoid Pilot
- **BP** Back-pressure Pilot
